My husband currently uses XM radio, in all of our semi trucks. It helps the drivers to plan there routes and plan for weather. I also use XM radio in my personal vehicle as well as my husband. Several of our friends us this product on there boats for instant weather it has saved several of us from being caught in terrible storms. I really do not understand why you would want to restrict us access to this product, I feel there are many other more important things (homeless, health care, ect.) in this world that need to be address maybe you should focus on them.
